**考試名稱:** Managing Office 365  
Identities and Requirements

**版本:** Demo

QUESTION:1

You have an Office 365 environment. Synchronization between the on-premises Active Directory and Office 365 is enabled.

You need to deactivate directory synchronization.

Which Windows PowerShell cmdlet should you run?

- A. Update-MsolFederatedDomain
- B. Remove-MsolDomain
- C. Remove-MsolFederatedDomain
- D. Set-MsolDirSyncEnabled

Answer: D

QUESTION:2

DRAG DROP

A company has a Windows Server 2008 domain controller and a SharePoint 2007 farm. All servers on the network run Windows Server 2008.

You must provide single sign-on for Office 365 SharePoint sites from the company's network.

You need to install the required software.

What should you install? To answer, drag the appropriate action to the correct location. Each answer may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Step	Action
1.	Install <input type="text"/>
2.	Install <input type="text"/>
3.	Install <input type="text"/>
4.	Configure trusts between environments
5.	Configure Active Directory synchronization

Answer:

The screenshot shows a software installation or configuration interface. On the left, there is a list of components to be installed, each in a yellow box with a green border:

- .NET Framework 3.5 with Service Pack 1
- AD FS 2.0
- Rollup 3 for AD FS 2.0
- SharePoint Server 2013
- SharePoint Server 2010 with Service Pack 1

On the right, there is an 'Answer Area' containing a table with the following steps:

Step	Action
1.	Install .NET Framework 3.5 with Service Pack 1
2.	Install AD FS 2.0
3.	Install Rollup 3 for AD FS 2.0
4.	Configure trusts between environments
5.	Configure Active Directory synchronization

QUESTION:3

You are the Office 365 administrator for your company. The company uses Active Directory Federation Services (AD FS) to provide single sign-on to cloud-based services. You enable multi-factor authentication.

Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.

You need to configure the environment.

What should you do?

- A. Disable AD FS multi-factor authentication.
- B. Configure an IP blacklist for the main office location.
- C. Disable the AD FS proxy.
- D. Configure an IP whitelist for the main office location.

Answer: D

QUESTION:4

You create an Office 365 tenant. You assign administrative roles to other users. You hire a new user named User2.

User2 must NOT be able to change passwords for other users.

You need to assign an administrative role to User2.

Which role should you assign?

- A. Service administrator
- B. Global administrator
- C. Delegate administrator
- D. Password administrator

Answer: B

QUESTION:5

DRAG DROP

An organization plans to deploy an Office 365 tenant. The company has two servers named SERVER1 and SERVER2. SERVER1 is a member server of the Active Directory forest that you are synchronizing. SERVER2 is a standalone server. Both servers run Windows Server 2012.

You need to use the Windows Azure Active Directory Sync tool to provision users.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows a drag-and-drop interface. On the left, there is a list of five actions in yellow boxes:

- Install and run the Windows Azure Active Directory Sync tool on SERVER2.
- From the Office 365 admin center, activate directory synchronization.
- Install and run the Windows Azure Active Directory Sync tool on SERVER1.
- Activate all synchronized users.
- Install Active Directory Domain Services (AD DS) on the member server.

On the right, there is an empty box labeled "Answer Area".

Answer:

	Answer Area
Install and run the Windows Azure Active Directory Sync tool on SERVER2.	Install and run the Windows Azure Active Directory Sync tool on SERVER1.
From the Office 365 admin center, activate directory synchronization.	
Install and run the Windows Azure Active Directory Sync tool on SERVER1.	From the Office 365 admin center, activate directory synchronization.
Activate all synchronized users.	
Install Active Directory Domain Services (AD DS) on the member server.	Activate all synchronized users.

#### QUESTION:6

Contoso, Ltd. plans to use Office 365 for email services and Lync Online. Contoso has four unique domain names.

You need to migrate domain names to Office 365.

Which two domain names should you exclude from the migration? Each correct answer presents part of the solution.

- A. contoso.us
- B. contoso
- C. contoso.local
- D. contoso.co

Answer: B,C

#### QUESTION:7

##### HOTSPOT

A company plans to deploy an Office 365 tenant.

You have the following requirements:

Administrators must be able to access the Office 365 admin center. Microsoft Exchange Online must be used as a Simple Mail Transfer Protocol (SMTP) relay for a line-of-business application that sends email messages to remote domains. All users must be able to use the audio and video capabilities in Microsoft Lync 2013.

You need to configure the ports for the firewall.

Which port should you use for each application? Select the correct answer from each list in the answer area.

Applications	Port or Ports
SMTP relay	<input type="text"/>
Office 365 admin center	<input type="text"/>
Lync (outbound video sessions)	<input type="text"/>
Lync (outbound audio sessions)	<input type="text"/>

Applications	Port or Ports
SMTP relay	<input type="text"/> <ul style="list-style-type: none"> <li>TCP 25</li> <li>TCP 443</li> <li>TCP 587</li> </ul>
Office 365 admin center	<input type="text"/> <ul style="list-style-type: none"> <li>TCP 80</li> <li>TCP 443</li> <li>TCP 10106</li> </ul>
Lync (outbound video sessions)	<input type="text"/> <ul style="list-style-type: none"> <li>RTP/JDP 50000-50019</li> <li>RTP/JDP 50020-50039</li> <li>UDP 50040-50059</li> </ul>
Lync (outbound audio sessions)	<input type="text"/> <ul style="list-style-type: none"> <li>RTP/JDP 50000-50019</li> <li>RTP/JDP 50020-50039</li> <li>UDP 50040-50059</li> </ul>

Answer:

Applications	Port or Ports
SMTP relay	<input type="text"/> TCP 25 TCP 443 TCP 587
Office 365 admin center	<input type="text"/> TCP 80 TCP 443 TCP 10106
Lync (outbound video sessions)	<input type="text"/> RTP/UDP 50000-50019 RTP/UDP 50020-50039 UDP 50040-50059
Lync (outbound audio sessions)	<input type="text"/> RTP/UDP 50000-50019 RTP/UDP 50020-50039 UDP 50040-50059

QUESTION:8

Your company deploys an Office 365 tenant.

You need to ensure that you can view service health and maintenance reports for the past seven days.

What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. Run the Microsoft Online Services Diagnostics and Logging (MOSDAL) Support Kit.
- B. View the service health current status page of the Office 365 admin center.
- C. View the service settings page of the Office 365 admin center.
- D. Subscribe to the Office 365 Service Health RSS Notifications feed.

Answer: A,B

QUESTION:9

DRAG DROP

A company is deploying an Office 365 tenant.

You need to deploy a Windows Server 2012 R2 federation server farm.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows a drag-and-drop interface. On the left, there is a list of six actions in yellow boxes. On the right, there is an empty 'Answer Area' box.

Answer Area

- Use AdfsSetup.exe to add the first federation server to the federation server farm.
- Install the Active Directory Federation Service server role.
- Use AdfsSetup.exe to add the second federation server to the federation server farm.
- Run the Windows PowerShell cmdlet **Enable-ADFSEndpoint**.
- Use the AD FS Federation Server Configuration Wizard to configure the first federation server in the federation server farm.
- Use the AD FS Federation Server Configuration Wizard to add the second federation server to the federation server farm.

Answer:

	Answer Area
Use AdfsSetup.exe to add the first federation server to the federation server farm.	Install the Active Directory Federation Service server role.
Install the Active Directory Federation Service server role.	
Use AdfsSetup.exe to add the second federation server to the federation server farm.	Use the AD FS Federation Server Configuration Wizard to configure the first federation server in the federation server farm.
Run the Windows PowerShell cmdlet <b>Enable-ADFSEndpoint</b> .	
Use the AD FS Federation Server Configuration Wizard to configure the first federation server in the federation server farm.	Use the AD FS Federation Server Configuration Wizard to add the second federation server to the federation server farm.
Use the AD FS Federation Server Configuration Wizard to add the second federation server to the federation server farm.	

QUESTION:10

DRAG DROP

A company plans to use Office 365 to provide email services to employees. The company obtains a custom domain name to use with Office 365.

You need to add the domain name to Office 365.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

	Answer Area
Connect to Windows Azure Active Directory.	
Run Remote PowerShell.	
Enable user access for Remote PowerShell in Exchange Online.	
Run the Windows PowerShell cmdlet <b>New-MsolDomain</b> .	
Run the Windows PowerShell cmdlet <b>New-MsolFederatedDomain</b> .	
Install the Windows Azure Active Directory module for Windows PowerShell.	

Answer:

	Answer Area
Connect to Windows Azure Active Directory.	Install the Windows Azure Active Directory module for Windows PowerShell.
Run Remote PowerShell.	
Enable user access for Remote PowerShell in Exchange Online.	Connect to Windows Azure Active Directory.
Run the Windows PowerShell cmdlet <b>New-MsolDomain</b> .	
Run the Windows PowerShell cmdlet <b>New-MsolFederatedDomain</b> .	Run the Windows PowerShell cmdlet <b>New-MsolDomain</b> .
Install the Windows Azure Active Directory module for Windows PowerShell.
